

Stormwater Resource & Funding Study

“Hanover Borough is undertaking a Stormwater Resource and Funding Study as part of a comprehensive review of programs and expenditures currently underway with the Borough. This study will audit and define existing and future programs related to spending on stormwater such as capital improvements planning, staffing, permit compliance, maintenance, etc. The intent of the study is to identify gaps either in program scope or funding sources that may necessitate the need to change how the Borough addresses and funds this vital utility function. The study, which will utilize a community advisory board to help evaluate ideas, policies and levels of service, is expected to take 9 to 12 months and will extend into 2018.”
