

## TAKE ACTION

---

*"If we are to go on living together, we must all be responsible for it."*

Protecting the environment is everyone's responsibility, and starts with understanding the issues. There is so much to learn! Please join our outreach today and take a proactive approach in sustaining our community.

For more information and to get involved contact Falyn Morningstar

# HANOVER ENVIRONMENTAL OUTREACH

---

*"The environment is everything that isn't me."*

Established 2017

## OUR ENVIRONMENT

*"Earth provides enough to satisfy every man's needs, but not every man's greed."*

It is a fact to say our environment will always be changing. As we become more developed we must adapt. The presence of industry, urbanization and humanity as a whole causes change in natural surroundings. Resources are limited making sustainability vital to us all. With increase of population comes increase of hazards: biological pathogens, chemical pollutants, physical hazards. There is an increase in waste, stormwater, and a larger need for water overall. So, who needs to be knowledgeable on these factors? We do.

## PURPOSE OF GROUP

It is absolutely necessary to involve and educate the public on today's environmental needs and concerns. Higher levels of knowledge correlate significantly with a higher degree of pro-environment and conservation behavior. This group welcomes diverse perspectives, talents and contributions and wants to inform the community on environmental solutions that make a lasting difference. We feel a responsibility to see that communication concerning various affairs be as ethical and effective as possible because communication shapes how we see and value our environment.

*"We shall need a substantially new way of thinking if humanity is to survive."*

## GOALS

Hanover Environmental Outreach will participate in and hold informative sessions as well as involvement sessions year-round dealing with all things environmentally based. We want the Hanover community to learn about topics including recycling, flooding, waste disposal, pollution, natural resource depletion, permitting requirements, public health issues, maintenance requirements, regulations, best management practices etc. The list is endless and will always be advancing. We envision learning just as much from you in return.

*"Conservation is a state of harmony between men and land."*
